GDPR at SAP Business One – What Is Available Now

General Authorizations: Authorizations allow users to view, create, and update documents and master data of business partners that you assign to them, according to data ownership definitions. By default, a new user has no authorizations. Each user can have only one manager who assigns permissions.

Data Ownership: Data ownership allows the company to have control over certain data elements. With the data owner function, user can define the rightful owner of data and information. Therefore, selected company's data can be secured and protected by the pre defined authorization. Information and data can be accessed by permitted roles and users only.

Data Archiving: Companies who have worked with SAP Business One for over two years can use the data archive wizard to archive closed transactional data relating to previous financial periods that have been closed. Closed transactional data can be closed sales and purchasing documents, reconciled journal entries, etc. Remark: this option is not supported for SAP HANA version.

System Access Log: SAP Business One allow users with special authorization to scan and review details about logs to the application such as which users logged into the system and when this action happened.

Change Log: Allowing users with assigned authorizations to check details about changes in certain fields i.e. when the change was made, storing original and updated values.

Manual erasure of personal data: Users are allowed to manually erase certain personal data unless these serve as primary keys and are used and interconnected with other objects. It is the user's responsibility to ensure that erasure of certain personal data is not in conflict with any regulations.

HANA Enterprise Search: Enterprise search enables the user to search certain fields and their values of the business objects in SAP Business One, version for SAP HANA that have been stored in the SAP HANA database server.

GDPR at SAP Business One – What Is To Come

Personal Data Setup: Centralized place to categorize which data are personal. There will be certain predefined objects which are by their nature related to natural persons. Users may perform certain customizations and extend this setting. Customized user-defined fields in the predefined objects can be also marked by users as personal.

Sensitive personal data stored in core application fields will be predefined without possibility to extend to additional fields. Sensitive personal data is accessible by authorized users only.

Access Log to Sensitive Personal Data: Tracking and logging controls to record read-access by a user to specific predefined sensitive personal data.

Personal Data Management Wizard: Includes a report which should list all records of personal related fields in a structured form. Possibility to query certain natural person and all occurrences and data stored about this natural person.

To support “right to be forgotten”, authorized users, based on their judgement, will be able to erase selected personal data, provided this action is not in conflict with other legislation.

Extending Change Log to additional forms: Extending functions allowing users with assigned authorizations to check details about changes in fields stored in various objects / forms.
